please do not report the images to the
Image Problem Mailbox.**

FIG. 1

by Nancy Marx

Down the hill, down to the big blue sea:
And on the way we'll use our senses as we look around,
To discover nature's wild things; some that don't make a sound.

For the yellow and black insect called a honey bee, it was lastly needed which produces a nice sound. Whose hive is over there in that big old tree.

It sure does look like a person's little hand:
It belongs to a mammal that has a masked face.
It's called a raccoon; they're found all over the place.

They're part of the wings of a Buckeye butterfly. If you're a bird, the fake eyes may surprise you. So that maybe you'll eat something else on the menu.

Imet = Buckeye butterfly
Butterfly with powers like
water, smoke, and
brimstone for notes.
Caterpillar = Buckeye larvae

I hear something now; it's coming from above.
It sounds like the call of a Mourning Dove.
You may have heard it before and you can call like it too.
It's simple to do, it's just woo, woo, woo.

We'll here's an unusual bump on a log.
Oops, got too close, it jumped, it's a frog:
There must be water nearby, oh yes here's a brook,
Let's go over there and take a closer look.

It's splashing and tumbling its way down to the sea. Where there live crabs, dolphins, starfish, and manatees. Now we've used only three of our senses, there are two more. That we'll use tasting the salty sea and feeling seashells on the shore.

Now that our walk to the sea is through,
I had fun using our senses and hope you did too;
There's so much to discover like the cries of the loon,
Let's all come back and do this again soon.

Bird - Common Loon
• Loon nest on fresh water
lakes in the North during
the Spring, in the Winter,
they migrate to the nearby
lake coastal areas.
